Clause	**Requirement – Test**	**Result - Remark**	**Verdict**
38.3	**Lithium metal and lithium ion batteries**		**P**
38.3.1	**Purpose**		**P**
	This section presents the procedures to be followed for the classification of Lithium metal and lithium ion cells and batteries.		-
38.3.2	**Scope**		P
38.3.2.1	Lithium metal and lithium ion cells and batteries which differ from a tested type by:		P
	a) For primary cells and batteries, a change of more than 0.1 g or 20% by mass, whichever is greater, to the cathode, to the anode, or to the electrolyte.		N
	b) For rechargeable cells and batteries, a change in watt-hours of more than 20% or an increase in voltage of more than 20%.		P
	c) A change that would materially affect the test results. Shall be considered a new type and shall be subjected to the required test.		P
38.3.2.2	For the purposes of classification, the standard definitions apply:		P
	NOTE: Units that are commonly referred to as ”battery packs” , “modules”, “battery assemblies” having the primary function of providing a source of power to another piece of equipment are for purposes of the Model regulations and this manual treated as batteries.		-
38.3.3	**When a cell or battery type is to be tested under this sub-section, the number and condition of cells and batteries of each type to be tested are as follows:**		**P**
	a) When testing primary cells and batteries under tests 1 to 5, the following shall be tested:		N
	Ten cells in undischarged states,		N
	Ten cells in fully discharged states,		N
	Four small batteries in undischarged states,		N
	Four small batteries in fully discharged states,		N
	Four large batteries in undischarged states		N
	Four large batteries in fully discharged states		N
	b) when testing rechargeable cells and batteries under tests 1 to 5 the following shall be tested:		P
	Ten cells at first cycle, in fully charged states,		N
	Four small batteries at first cycle, in fully charged states.		P
	Four small batteries 50 cycle ending in fully charged states.		P

Clause	**Requirement – Test**	**Result - Remark**	**Verdict**
	Two large batteries at first cycle, in fully charged states.		N
	Two large batteries 25 cycle ending in fully charged states.		N
	c) When testing primary and rechargeable cells under test 6(Impact), the following shall be tested in the quantity indicated:		P
	For primary cells, five cells in undischarged states and five cells in fully discharged states		N
	For component cells of primary batteries, Five cells in undischarged states and five cells in fully discharged states.		N
	For rechargeable cells, five cells at first cycle at 50% of the design rated capacity,		N
	For components cells of rechargeable batteries, five cells at first cycle at 50% of the design rated capacity.		P
	For prismatic cells, ten test cells are required instead of the five described above, so that the procedure can be carried out on five cells along the longitudinal axes and, separately, five cells along the other axes. In every case, the test cell is only subjected to one impact.		P
	d) When testing rechargeable batteries under test 7(Overcharge), the following shall be tested in the quantity indicated:		P
	Four small batteries at first cycle, in fully charged states.		P
	Four small batteries after 50 cycles ending in fully charged states.		P
	Two large batteries at first cycle, in fully charged states,		N
	Two large batteries after 25 cycles ending in fully charged states.		N
	e) When testing primary and rechargeable cells under test 8(Forced Discharge), the following shall be tested in the quantity indicated:	The requirement is not applicable to test batteries.	N
	Ten primary cells in fully discharged states		N
	Ten rechargeable cells, at first cycle in fully discharged states		N
	Ten rechargeable cells after 50 cycles ending in fully discharged states		N
	f) when testing a battery assembly in which the aggregate lithium content of all anodes, when fully charged, is not more than 500g, or in the case of a lithium ion battery, with a watt-hour rating of not more than 6200 Watt-hours.		N

	03	24.6℃		P
	04	24.5℃		P
	05	24.5℃		P
Ambient temperature: 25.0℃				

Conclusion:

High Discharge Lithium Polymer Battery had passed Crush test.

Clause	**Requirement – Test**	**Result - Remark**	**Verdict**
38.3.4.7	**Test 7: Overcharge**		**P**
38.3.4.7.1	Purpose		P
	This test evaluates the ability of a rechargeable battery to withstand an overcharge condition.		-
38.3.4.7.2	Test procedure		P
	The charge current	2×10000=20000mA, Twice the manufacturer's recommended maximum continuous charge current	P
	The minimum voltage of the test:		P
	a) The minimum voltage of the test (The manufacturer's recommended charge voltage is not more than 18V).	2×16.8=33.6V the lesser of two times the maximum charge voltage of the battery or 22V,	P
	b) The minimum voltage of the test (The manufacturer's recommended charge voltage is more than 18V).		N
	Ambient temperature.	25℃	-
	The duration of the test.	24 hours	-
38.3.4.7.3	Requirement		P
	Rechargeable batteries meet this requirement if there is no disassembly and no fire within seven days of the test.	There is no disassembly and no fire within seven days of the test.	P

Group	**No.**	**Criteria**	**Result**
Group A (at first cycle, in fully charged states)	01	There is no disassembly and no fire within seven days of the test.	P
	02		P
	03		P
	04		P
Group B (after fifty cycles ending in fully charged states)	05		P
	06		P
	07		P
	08		P
Ambient temperature: 25℃			

Conclusion:

High Discharge Lithium Polymer Battery had passed overcharge test.

Clause	**Requirement – Test**			**Result - Remark**		**Verdict**
38.3.4.8	**Test 8: Forced discharge**					**P**
38.3.4.8.1	Purpose					P
	This test evaluates the ability of a primary or a rechargeable cell to withstand a forced discharge condition.					-
38.3.4.8.2	Test procedure					P
	Each cell shall be forced discharged at ambient temperature by connecting it in series with a 12V DC, power supply at an initial current equal to the maximum discharge current specified by the manufacturer.					P
	The specified discharge current is to be obtained by connecting a resistive load of the appropriate size and rating in series with the test cell, Each cell shall be forced discharged for a time interval (in hours) equal to its rated capacity divided by the initial test current (in ampere)					P
38.3.4.8.3	Requirement					P
	Primary or rechargeable cells meet this requirement if there is no disassembly and no fire within seven day of the test.			There is no disassembly and no fire within seven days of the test.		P
